

New features synthesis of V6

Major changes

1. Phase Manager has now a phasing simulator called “LIVE VIEW”

With the Live View you can :

- Watch the phasing evolution without creating deliverables,
- easily Identify inconsistencies in your phases by isolating activities in you simulation,
- Create animated videos of your phasing book with few clicks.

2. Mobile pectograms

In Phase Manager 6 you can now move images along an axe following the evolution of linear work.

Really convenient for railway / road / piping projects, you'll be able to create a dynamic evolution of markups and construction machineries.

3. GIS displaying in background for PDF, DXF or SVG

In this new version, you can display a GIS around and in background your drawings, of course if your drawings are georeferenced. A real asset to identify elements that are not visible on your drawings.
